What is your favorite feature of Chrome/Safari/FF's Inspector Tool and Developer Console (choose 1-many browsers)? *

Explain event bubbling and different use cases that you've encountered. *

Why would you use JSONP instead of JSON? *

When it comes to visual effects, when would you use CSS3 instead of Javascript/jQuery? *

Given an array with a mix of strings and other arrays (of strings), flatten it into a single array of strings using the programming language of your choice. *

Describe a race condition that you have encountered in a prior project? How did you go about fixing the issue? If you haven't encountered one, explain how you would go about fixing one. *

What is your favorite data storage system and why would you use it instead of another (also of your choice)? *

What was the most difficult project that you've worked on (school, freelance, just for fun) and why was it so difficult?
What would you do differently if you could do it again?

Given the following conditions, model a database that allows entry of:

- Users (who have a name and email address).
- Each user can have multiple files.
- Each file can be shared with multiple other users
- Files can be tagged with categories.

(deliver answer as image/pdf/text)

Write a function (in Javascript) that given a string will return a float value for that string. It should handle any string passed into it. Do not use parseFloat();. Deliver the file in the .js format.

If you could create one company-wide holiday, how would it be celebrated and what would it be called (extra points for sources cited)? *
